Tips

May 2021

May 1 felt like summer, not spring. Everyone, including the orioles and hummingbirds, are ready to get this season started, as verified with sightings in Minnesota posted on the journeynorth.org website. Better get out your feeders or pick some up at the mill. The folks at the mill are ready also. The greenhouse is open with flowers, hanging baskets, patio pots, herbs and cool-season crops available. Expect the peppers and tomatoes May 14, but check the website to confirm the date. Followers on Facebook will see a post and Timely Turf Tips subscribers will receive an email to confirm the arrival of the peppers and tomatoes.

Lawn, Tree & Shrub Care

If your yard had problems with crabgrass or other annual weeds, apply a pre-emergent herbicide when the soil temperature reaches 50 degrees. Be sure to watch your email for a notice from Steve when it is the right time to apply. The mill has 50# bags of Crabgrass Preventer available. Try a corn gluten meal product if you prefer an organic option of control. A 50# bag with 9-10% nitrogen will cover 2500 sq. ft. Both products need to be watered with $\frac{1}{4}$ - $\frac{1}{2}$ " of water shortly after applying for best effectiveness.

Fertilize your lawn with an application of 25-0-15 fertilizer, now improved with 50% slow-release nitrogen, sometime between the end of May and mid-June. Save by using the coupon below.

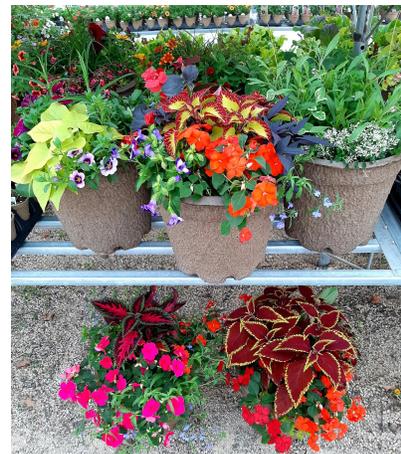

May is Arbor month in Minnesota and a great time to think about fertilizing trees and shrubs. The plants will benefit the most if fertilizer is incorporated into the soil in early May before the main growth spurt occurs. If the soil is sandy, consider splitting the amount between two applications - one now and another one sometime during May 15 - May 31.

Garden Care:

Add any soil amendments (compost and aged manure is best added 2-3 weeks before planting) and/or fertilizer recommended by your soil test results to your garden. Remember the crumble test from last month's tips; if the garden soil doesn't break apart with slight pressure after forming a ball, then wait to begin in order to prevent soil compaction.

Spring care for garlic. Uncover garlic and when new leaves begin to grow, fertilize the bulbs with a high nitrogen fertilizer that releases the nutrients slowly over the growing season. Steve recommends Grower's Special 12-6-6 with time-release fertilizer, available at the mill. Work 1-2 teaspoons into the soil around each plant and mulch again. Remove any developing flower stalks to encourage bulb growth.

Remember to thin those early seeded crops like radishes, leaf lettuce and spinach to allow the young plants room to grow. Tomatoes and peppers need to be planted late May or early June. They like warm soils for a good start.

Greenhouse open

May and early June hours are: Monday thru Friday - 9am to 7pm, Saturdays - 8am to 6pm, Sundays - 9am to 6pm
